Test a licence file

Updated 3 November 2026 · unforged.ai/help/nib/test-a-licence-file

The licence server download includes a small test you can give any of our licence files to, whether it's your main licence or one you made for a client. It's worth running before you send a licence on or install it, and it needs no connection.

1 Give it the licence

On Linux or a Mac, run **./test-licence client.lic**, or put the licence files in the same folder and run **./test-licence** on its own. On Windows, drag the licence file onto **test-licence.cmd**.

2 Read the answer

It says what kind of licence it is, who it's for, the dates it runs between and what it includes, then whether it works on this computer today and, if not, what to do.
